

Junior Data Scientist (NLP)

1. A question-and-answer dataset (JSON file) can be downloaded from the link below. It contains 7,830 questions and answers.
 - a. Click [Here](#) to download.
2. Clean the dataset and prepare a CSV file that contains `document_title`, `question_text`, `short_answer`, `yes_no_answer` columns.
 - a. If you find two or more values for `short_answer` column, you can name them as `short_answer1`, `short_answer2` and so on.
3. Build a Gradio, Streamlit or React app to explore the cleaned dataset with some filter options.
4. Maintain all source files in a VCS.
